The Hearth Wave Equation
(Mass Formation and Evolution)

There are various physics phenomenon which can find a simple explanation in linking gravity and electromagnetism. Einstein's Relativity can simply explain only the mass because he considered time as a scalar rather than a vector. The intension of this paper is to propose a new point of view, treating time as a three-dimensional vector, finding three vector value formula by three-dimensional space-time formula (curvature formula), finding a new symmetry on the plane for a wave equation substitute for Maxwell's symmetrical wave, only E and only B, not E and B linked. This linking is in error; in fact they are a two sum effect. The electromagnetic wave in space has, as well known, three energy component: B field E field and wave length (frequency). This energy is acknowledged, but we must see the wave like an elastic chain of single wavelets (a string of individual wavelets).

1 Introduction

For the Hearth wave equation $\lambda = 2.590211520 \times 10^{13}$ m, $\frac{1}{4}\lambda = 6.475528800 \times 10^{12}$ m, and $\frac{3}{4}\lambda = 1.942658640 \times 10^{13}$ m. At these lengths the location of the mass is determinable with a high probability.

The formula for λ is $2\pi R/\beta$ or $c \times rotationtime$. For the Hearth equation $c \times 24\text{h.x.}60\text{m.x.}60\text{s.}$ $\Delta T =$ maximum $= \frac{2\beta}{1-\beta^2} = 3.079824694\text{E-06s.}$ Hence, the positions of the Moon and all the planets do not depend upon the Sun or the stars.

Stars, galaxies, quasars, pulsars, neutron stars, black holes at the centres of galaxies, and the positions of all masses in the Universe depend on the gravitational wave of a very big black hole (Big Bang), where rotation $v = c$. These waves have a very small wavelength but a very great amplitude: $\Delta T = $ maximum $= \infty$. As shown in figure 1, the wave interference can create a stationary wave (mass).

Fig. 1:

With this explanation, black holes at the centres of galaxies are not fearsome objects but a life source from the Big Bang. They are in all galaxies and with the neutrino are the first form of mass. Thereafter the usual mass laws of Newton and Einstein follow. According to my theory all protons (atoms) have at their centres an infinite force (couple Boson/Fermion, Photon/Neutrino at $M = 0$), which is the cause of our existence! This infinite force is a chain impossible to break, it is our link with the Big Bang, and this is the cause for infinite force to mass necessary to obtaining the velocity c.

This is not a problem because by my theory mass has a transformation on course to c obtaining in fact a change in free-wave (energy). By my theory the B and the E fields are stationary waves in other two dimensions of space. Then for G, B, E, first is formed mass neutrino photon, after is formed the Magnetone Magnetino couple, and then the electron positron couple.
