*Abstract: Redshift as a measurement of cosmological distance has been falsified by Mr. Halton Arp's discovery.*

It is known by the author that Mr. Halton Arp has falsified the idea that redshift is a determinate of cosmological distance. Below is a picture of the falsification of redshift being a determinate of cosmological distances. The picture is of NGC 7319 with a low redshift of  $z=.0225$  and a quasar directly in front of it with a redshift of  $z=2.11$ .<sup>[1]</sup>

It should be known to the reader that Big Bang is a religion now as any institution that chooses to keep Big Bang can be disregarded as a religious establishment. Big Bang is no longer a scientific theory <sup>[2]</sup> as well as the already falsified proto-planetary disk <sup>[3]</sup> and even black holes. <sup>[4]</sup> These theories have failed. A new theory called Stellar Metamorphosis can explain how the Earth formed, <sup>[5]</sup> what the early Earth looked like <sup>[6]</sup>, what it will look like, <sup>[7]</sup> and many other things.
