

A NEW MODEL OF THE ATOM

Yibing Qiu

yibing.qiu@hotmail.com

The Basic Points of Views:

1. In the atomic nucleus inside the outer space, there are no any forms of classic mechanical movement.
2. There are no any forms of electronic orbits; Electronic orbiting around the nucleus in a circular motion does not exist.
3. Concentric spherical layer model

Electrons in a form or in more basic forms of existence in the space outside the nucleus of the atom, (perhaps, such as: more "basic" more "simple" charged subatomic particles, pure charge clouds, subatomic particles with pure synthetic substances and other charges, etc.).

Through the mutual electromagnetic interaction with the nucleus, Formed: the nucleus is the sphere center; different volume charge density; energy levels discrete (energy levels quantized); higher to lower from the inner to the outer; concentric spherical multilayer layer-shaped volume charge density and energy levels distribution structure and morphology.
