

# A NEW MODEL OF THE ATOM

*Yibing Qiu*  
*yibing.qiu@hotmail.com*

## **Main viewpoints & conclusions:**

1. In the atomic nucleus inside the outer space, there are no any forms of classic mechanical movement.
2. There are no any forms of electronic orbits; Electronic orbiting around the nucleus in a circular motion does not exist.

### 3. Concentric spherical layer model

The extranuclear charges (electrons) in soft matter form existence and completely full in the space outside the nucleus of the atom, through the mutual electromagnetic interaction with the nucleus, Formed: the nucleus is the sphere center; different volume charge density; energy levels discrete (energy levels quantized); higher to lower from the inner to the outer; concentric spherical multilayer layer-shaped volume charge density and energy levels distribution structure and morphology.
