In the present article the solution of the phenomena of a matter, the Universe, the Singularity and a time is given.

Let's imagine that our Universe has the center. Let in the Universe center is a material (from a word 'matter') core. The Universe core consists of the 'pure' matter. Let's name Singularity the Universe core. We will assume that this matter's core radiates into the Universe 'pure' matter in the form of elementary particles of a matter, we name their atoms of a matter. It is possible to consider that the Singularity represents matter's harmonious oscillator. Its frequency sets, defines a rhythm of the nature. One step of rhythm of the nature defines elementary unit of connatural universal time. It will be the dimensionless time. In each step of a rhythm of the nature in the Universe one atom of a matter is radiated. Each atom of a matter contains the same, quite certain quantity of a 'pure' matter. If this quantity of a matter to put in conformity of time duration we will define unit of dimensional connatural universal time. Dimension of this time duration will coincide with dimension of a matter. Here that there is a matter! Here that there is a Universe! Here that there is the Singularity! Here that there is a time!
