

MERCURY: PLANET OR COMET?

Nikitin V. N., Nikitin I.V.

Mercury – a comet nucleus

MERCURY: PLANET OR COMET?

Hypothesis of existence of a precession of an orbit of rotation of object of Solar system under the name Mercury.

Object of Solar system under the name Mercury - not the planet, but the COMET NUCLEUS to which existence of a precession of an elliptic form of an orbit of its movement is peculiar.

Horizontal component of gravitation of Solar system - the reason of existence of a precession of orbits of rotation of its objects.
