

IDHAYAN'S SPIN THOERY OF GRAVITY PARTICLE

GRAVITY PARTICLE

Our universe is entirely made up of gravity particle, which is spherical, Indestructible ,identical ,negligible frictional surface.

ELEMENTARY PARTICLE

Gravity particle are closely packed and it cannot move, However it can spin, they use frictional surface to spin their surrounding particle, They spin geometrically to create an illusion of elementary particle or even the particle that made up of elementary particle refer fig 1.1, Their efficiency is 100 percent

FIG 1.1

COSMOS

EXPANSION OF SPIN WAVE IN BIG BANG

The gravity particle are aligned closely at rest, When a single gravity particle spin at an immensive speed in a fraction of a second refer fig 2.1,

FIG 2.2

Which gives away their spin count to the nearby particle geometrically, Then the centre particle comes to rest from the spin refer fig 2.2.

FIG 2.3

The surrounding particle further spin their nearby particle ,That is the spinning count is decreased when they moving further away from the centre and the number of particle which are at rest starts to spin increased refer fig 2.3,

SPIN COUNT DECREASED BUT THE NUMBER OF PARTICLE SPINNING INCREASED

Fig 2.3

The gravity particles in the Big bang core comes to rest also increased. Big Bang grows like the hollow sphere that is growing refer fig 2.4.

FIG 2.4

At a point when the geometrical force creates a spinning wave structure it resulted into the formation of an elementary particle , Spinning of these elementary particle resulted into creation of an atom along with electromagnetic force

CONTRACTION OF SPINNING IN THE UNIVERSE

Difference in spinning gravity particle speed in the loops create friction that attracts each other. As a time progress in the contraction of universe ,gaining speed of particle brings down all the spinning counts to maximum refer fig 2.5,

PARTICLE GAINING SPIN COUNT

FIG 2.5

That is if a particle X,Y,Z has a spin count of 5,2,1 respectively eventually the Y and Z losses its spin to the fastest particle X and become 8 spinning count refer fig 2.6

PARTICLE GAINING SPIN COUNT

FIG 2.6

ELECTROMAGNETIC WAVE STRUCTURE AND GRAVITY PARTICLE

By the above theory we can know that gravity is a single loops of particles that spins together that goes in and out of elementary particles and electromagnetic waves structural refer fig 3.1 and 3.2

electro magnetic wave structure

FIG 3.1

Electro magnetic wave structure in gravity loop layer spins at different rate , Same colour is the same spin count

FIG 3.2
