

## PRINCIPLE OF RELATIVITY OF ALL

Nikitin V.N., Nikitin I.V.

Any limited and closed system has own energy which depends on the speed of her movement and situation concerning Space of Nothing.

## PRINCIPLE OF RELATIVITY OF ALL

The vacuum – the Wednesday containing gas with pressure is much lower than atmospheric. In practice strongly rarefied gas is called a technical vacuum. In modern physics understand the space which is completely deprived of substance as a physical vacuum. Even if it would be succeeded to come into this fortune in practice, it wouldn't be absolute emptiness. The quantum theory of the field claims that in consent with the principle of uncertainty in a physical vacuum virtual particles constantly are born and disappear: there are so-called zero fluctuations of fields. The space has the low density and pressure therefore is the brought most closer to a physical vacuum.

There is also an exclusive approach to emergence and a structure of a physical vacuum is a Space Nothing.

Hypothesis: any limited and closed system has own energy which depends on the speed of her movement and situation concerning Space of Nothing.
