The nature of origin of a crater of "Monster eyes" on Earth is similar to a crater "Spider" on Mercury /

### AS TWIN BROTHERS

The tragedy, planetary scale can happen at any time. In Yellowstone National Park of the State of Wyoming (USA) the volcanic eruption just about can begin. Since March 28, 2018 on him 25 tremors are recorded already, new geysers are formed. Big groups the park is left by wild animals.

The Yellowstone volcano is not cone-shaped education with a muzzle. By the form it is the lowland called by volcanists a caldera which reminds the huge hollow. Yellowstone – not remarkable hollow, but the area of eruption of a huge volcano reaches several thousand square kilometers.

Hypothesis: the nature of origin of a crater of "Monster eyes" on Earth is similar to a crater "Spider" on Mercury (fig. 1).
