

## TO AND FRO

Nikitin V.N., Nikitin I.V.

In the present we observe a projection of surrounding space on an information field of Earth.

## TO AND FRO

Try to impose to us and even to inspire the idea that it is possible to make a voyage on time – to and fro. In media imaginations about the Big Bang, natural cataclysms, huge Black holes and light distances don't cease. Then what we see in the sky: last, future or real? The terrible delusion of great scientists is that they consider virtual processes only in one direction, and conclusions are drawn sometimes about what isn't known! For example, when try to prove us a possibility of a time travel, forget that it will be necessary to return to the present. If we can move on the bent space in opposite directions, so we can look younger and grow old? There – to look younger, here – to grow old. The following is obvious: to and fro is and there is a present and consequently – neither there, nor here!

Hypothesis: in the present we observe a projection of surrounding space on an information field of Earth. Each inhabitant of Earth sees at the same time same image, without interfering with each other, just as in art gallery!

According to this hypothesis everything falls into place and speaks simply: the flat image of objects of the Universe (The moon, the Sun, etc.), a travel at desire and an opportunity to the past, the present and the future, a divergence of light beams of the Sun and vsevsevozmozhny visions and illusions in the present and the future.

By analogy with quantum physics it is necessary to create a quantum intuition (vision). You channelize new physics: quantum intuition!
