In this paper we will talk about I numbering system I want to invent which is based on (the knowledge of true and false being 1 and 0 (true and false

Lets take a look at our hands it has 10 fingers which uses the decimal system its ok

Lets take out the true and false which are the 1 and 0 (one and zero) from the decimal system leaving eight numbers which are 2 3 4 5 6 7 8 9 but first lets take a look at how I thought of this

These are 10 mathematical stuff made from 1 and 0 or the true and false below

true fact or something) $1*0/1*1=0$ $0*1/1*1=0$ $0*0/1*1=0)1=1*1/1*1$

not understood $1*1/1*0=$not understood $1*1/0*1=$not understood$=0*1/0*1$
$0*1/0*0=$not understood $1*0/0*0=$ not understood $0*0/0*0=$ totally not understood

When looking at this you see that if you take the true and false which are $1*1/1*1=1$ and $0*0/0*0=$totally not understood you are left with 8 of the 10

Now to see how you can apply this new numbering system you should look at what follows

Lets start counting in this numbering system with 2 and end with 8 so we say 2 3 4 5 6 7 8 9

Lets do this mathematical trick $2*3*4*5/6=120/6=20$ which is $2*10=20$

?Lets try an easier one which is $3*4*5/6=60/6=10$ you see the trick

Adding a truth to false and another truth(which is my theory!!!!) which all amounts to 3 (2 truths and one false) which starts with 3

in this one you get to the numbering system in your hand or 10 in the second easier mathematical trick and also in the mathematical trick starting with 2 ends with 20 !!!!!which when divided by 10 you get 2 which is the number you started with
