The Assumption Of S. Virgin Mary -Written in Cairo – Egypt – 3rd May April 2020

Abstract

Paper Question

- How The Earth Moon Is Created?
- The Giant –Impact Hypothesis provides a good description about How the Earth Moon was Created...
- I have suggested Mars Migration Theory which can solve many difficulties faces The Giant- Impact Theory and provides a very good answer for the question how the Moon was created?
- Mars Migration Theory is reviewed in this paper introduction

Now

- Mars Migration Theory tells that – the Earth Moon was created by Mars Collisions With Venus & Earth and from these Collisions debris the Earth Moon was created in addition to Mars moons and the Asteroid belt

But

- If the Earth Moon is created from the collisions debris – why the moon diameter is created based on geometrical rules?! How to do that?

Let's consider this question in more details... for example

- The earth Moon diameter x the sun diameter = Jupiter orbital circumference – Why? this data is one of similar hundreds – for example – the moon diameter x the moon orbital motion distance (from perigee to apogee 43000 km) = Earth orbital distance...!

I want to say... that

- The Earth Moon Diameter was not created by any random process - **Some Geometrical Power** is found behind and forced the moon to have this (Specific Diameter & Circumference) which will be in harmony with all planets data as we have seen...!
- What's this Geometrical Power? Is it the gravity force? can the gravity produce a complex geometrical effect? What Mass the Earth should have to produce its moon with another diameter? Based on what equation?

Let's to consider this question as deep as possible in this paper

1- Introduction

Mars Migration Theory Revision:

- Mars original orbital distance was 84 mkm. and Mars had migrated to 227.9 mkm
- Through Mars Motion from 84 mkm to 227.9 mkm, Mars had collided with Venus and then Mars had collided with Earth also.
- From the Collisions debris The Earth Moon was created –and Mars had found its moons. And the rest debris had attracted by Jupiter and created **The Asteroid Belt**

The Giant-Impact Hypothesis is in consistency with **Mars migration theory**

But Instead of the (Supposed Planet) **Theia**, Mars itself made the collisions.

Mars migration Theory solves The **Giant-Impact Hypothesis difficulties**:

- I. **Why Venus has No Moon?** – Because Mars had migrated and moved from 84 mkm to 227.9 mkm and pushed all debris in its motion direction – **far from Venus** – So Venus had found no debris around to create its own Moon - But Earth has a greater Mass and the debris lost their motion high momentum at Earth Position– so Earth could attract some debris and create its moon
 - II. **The Lunar Magma Ocean (LMO) Origin– is Venus** – because the moon is created by 3 planets debris (Venus – Earth – Mars) – So their rocks are found in it
 - III. **Why The Iron Oxide (Feo) of the Moon= (13%)? Because** The rate (13%) is a middle between Mars rate (18%) and the terrestrial mantle (8%).
 - IV. **Why Mars diameter (and Mass) are decreased through the history? Because** of the collisions – Mars diameter lost around (4.1 %) (And Mars mass also which causes difficulties for Mars gravitation equation)
 - V. **Mars migration** is done **Because of The Sun Creation Process**
 - VI. Is there a possibility that Mars will return to its original point (84 mkm)? **Yes**
 - VII. **Why?** Because the Planet orbital distance is defined relative to its diameter (and Mass) Mars now is in **the wrong Position**- but forced to it because of the sun effect
- Conclusion** The Giant-impact hypothesis supports Mars migration Theory

NOTE Please

VIII. Mars Had A Life When It Was In Its Original Orbital Distance Before The Sun Creation – But Mars Lost This Life Because Of Its Migration And That Explain Why There's Many Features Of Ancient Life Found On Mars

Now Let's provide a list concerning the changes happened in the solar system as result of the sun creation in following...

Before The Sun Creation

The Solar Planets Order Was As Following

- Mercury (where Pluto was The Mercury Moon) – then Mars –then Venus – Then Earth- The Uranus – Then Neptune – Then Jupiter –
- The orbital distances of Mercury – Venus – Earth - aren't changed.

The Solar System Before Sun Creation

- Mercury Axial Tilt was 1 degree
- Mercury Day Period was 176 Solar Days
- Venus Axial Tilt was 1.774 degrees ($= \pi^{1/2}$ degrees)
- Mars Orbital Distance was 84 mkm
- Pluto was The Mercury Moon

Saturn Was Created After The Sun Creation

The Solar System After The Sun Creation

- Mercury Axial Tilt becomes 0.01 degree
- Venus Axial Tilt received The lost value (from 1 to 0.01) – to save the inner planets energy – So Venus axial tilt changed from 1.774 deg to 177.4 deg
- Pluto had to move far from Mercury – with a distance = 57.9 mkm (Mercury orbital distance) for each point (from 1 degrees to 0.01 degrees) –that forced Pluto to move far from Mercury with a distance $= (100 \times 57.9 \text{ mkm}) = 5906 \text{ mkm}$ Pluto orbital distance
- **Mars had migrated from (84 mkm) to (227.9 mkm)**
- As a result of Mars Migration the Earth Moon was created.
- Mercury Day was decreased by 84 minutes =5040 seconds
- The inner Planets changes are recorded with Uranus Data
- Uranus hold the solar system to prevent its destruction-
- Uranus depended on Earth basically and Venus to save the solar system.
- Uranus caused Saturn to be created to help the solar system rescue.
- Saturn & Jupiter unified their power to save the solar system.
- Uranus & Earth Connection is the first basic connection to save the solar system and the next one is the relationship between Venus and Saturn.
- The Cycle 2737 years is a real cycle found to record the events.
- The planets data analysis shows that Uranus effects vertically on the solar system – and Uranus by this effect prevent any overturn motion can be done by any planet and by that Uranus help to unify the planets general motion around the sun.
- Uranus Data Analysis shows that – there's a perpendicularity in the solar system motion – based on that we conclude – "The is on vertical line relative to Uranus – means – There's 180 degrees between the sun and Uranus on the vertical level.

Paper Contents

2- The Earth Moon Creation

3- Mars Migration Theory Proves Revision

2- The Earth Moon Creation

2-1 Preface

2-2 What's The Moon Basic Property

2-1 Preface

I- Data

(1) (The Sun Diameter / The Earth Moon Diameter) = Earth Orbital Distance / Earth Moon Distance)

(2) The Earth Moon Circumference 10921 km x 86400 seconds = 940 mkm

(3) The Earth Moon Circumference 10921 km x 27.3 days = 300000 km

(4) The Earth Moon Circumference 10921 km x The Sun diameter 1.392 mkm = Jupiter orbital circumference

AlsoThe Earth Moon Circumference 10921 km x Jupiter Circumference = Jupiter orbital circumference

II- Discussion

The Previous data is a point from a sea – the Earth moon diameter is very specific value – it simply is in consistency with different planets data!

Any equation of the previous has its deep (and strange) meaning For Example we see the sun disc = the moon because of Equation No. 1 and based on this same equation the total solar eclipse is occurred!

Let's discuss Equation no. 2

Equation (2)

The Earth Moon Circumference 10921 km x 86400 seconds = 940 mkm

This equation tells that – If Earth revolves around the sun a complete revolution in one solar day only – so the moon circumference will be = a distance of Earth Motion for **1 second** of time!

Is that useful any how? Does that refer to the meaning "There Are Many Rates Of Time In The Solar System?" can such rates of time be possible?!

Equation (3)

The Earth Moon Circumference 10921 km x 27.3 days = 300000 km

The equation tells that – if the moon rotates around its axis once every day (as the Earth does) so the moon during its orbital period (27.3 days) will pass a distance = light motion distance for **1 second**

The 1 second is repeated with the moon circumference – has that any effective advantage..?!

I want to say that...

The Earth moon circumference 10921 km (and diameter 3475 km) is created based on **Geometrical Calculations**! It can't be created by any random process!

The Creator of the Earth Moon data had used some geometrical methods to produce specific value for the moon diameter! it's not random process depends on Earth – and it surely depends on Earth Mass – but – not by any random – the Earth Mass is used by a geometrical force to produce this specific moon!

What we will discuss about the moon, should use also for any other planet...we here still try to solve the question (how the matter is created?)

2-2 What's The Moon Basic Property?

The Mass – Newton told us that clearly

But let's return to our discussion About what we argue here?!

While the moon is created from the collisions debris – the moon creation depended on geometrical calculations – we discuss here how??

We accept that – the mass is the matter basic property – so the moon mass is created at first

Relative to what? Based on what the Earth Moon Mass should be 0.073×10^{24} kg

Let's divide the discussion in parts in following (we will use the moon word to refer the earth moon because we deal with no other moon here)

The Discussion Part I

I-Data

(a)

(Jupiter Mass / The Moon Mass) = 25920

(b)

Light beam with known velocity 0.3mkm/sec travels during 86400 seconds (a solar day) a distance = 25920 mkm)

More Discussion

Equation No. (a) tells that the moon mass is created relative to Jupiter Mass!

How that?

The Earth attracted the debris and based on Earth mass the Earth created its own Moon – what relationship can be found here with Jupiter?

Why Jupiter defines the moon mass?

We have 2 reasons for that let's write in following:

(1st Reason)

There's a mutual relationship between Jupiter and the inner planets – which we have studied in a long series of papers (6 papers)

Jupiter Effect On The Inner Planets (from I- IV)

<https://vixra.org/abs/2002.0565>

In that series we have concluded that – the inner planets define their orbital circumferences relative to their distances to Jupiter. And in one more deep study we have discovered that Jupiter created the inner planets orbital circumferences and Jupiter orbital circumference depends also on the inner planets orbital circumferences
Shortly

The relationship between Jupiter and the inner planets is so deep and can't be considered as common relationship – and based on that the inner planets in fact live on Jupiter energy – and by that – not only the Moon Mass is defined relative to Jupiter Mass but the Earth mass itself is defined relative to Jupiter Mass

(2nd Reason)

Jupiter Energy Analysis shows that Jupiter energy depends on light motion for 2 complete solar days

Equation No. (b)

Light beam with known velocity 0.3mkm/sec travels during 86400 seconds (a solar day) a distance = 25920 mkm)

Equation No. (b) tells that – the value 25920 mkm is produced by light motion for a solar day -

And

We know that- Jupiter Pluto Distance is created depended on light motion for 2 solar days and this distance (Jupiter Pluto Distance) express Jupiter Energy which we have analyzed frequently

Please review

The Sun Creation Reason And Effect (III) (Page no. 23)

<https://vixra.org/abs/2005.0033>

Please Note

I recommend strongly to review the mentioned papers – because – I don't create the ideas – I try to explain how the data is created- and in these papers the data is found clearly and strongly where can't to repeat tenths of pages in each new paper

I write that – because the first vision for the ideas may lead to conclude that some pure coincidences are found behind and then the argument is around nothing.... It's not true The data is just so strong and forced me completely to provide the suggested ideas to explain how this data is created...

Let's summarize what we have here

- While The Moon Was Created From The Collisions Debris – the Moon data was created based on geometrical rules and calculations – there's any random description.... how?
- The secret is found with Jupiter – where Jupiter forced Earth to define specific Mass for her Moon and by this specific Mass (0.037×10^{24} kg) Jupiter could use the moon based on its data and by that Jupiter and the moon Mass produces the rate 25920 which is created by the equation (25920 mkm/1mkm) where 25920 mkm is the distance light known velocity (0.3mkm/sec) travels during a solar day (86400 seconds) and 1 mkm =1 degree = **Mercury Ancient Axial Tilt**
- By this creation process for that moon – Jupiter makes the Moon as the specific planet in the inner planets- and based on that the moon & motion data became so specific and effective....

IN THE ALMIGHTY GOD NAME

Through the Mother of God mediation

I do this research

- Mercury Ancient Axial Tilt using in the process caused Mercury to be a player in the moon creation and that creates an eternal connection between Mercury and the moon motion – for that reason – the moon daily displacement 88000 km can be seen easily as 88 days (Mercury orbital period)

Please Note

- We deal with a light motion (25920 mkm) and because of that – what's time value for some planet can be working as a distance value for another planet that's explain the previous idea
 - That's why the distance 25920 mkm we see as 25920 years = The Precession Cycle
 - Very important to see the solar system in its new vision where the solar planets are not separated points from each other – on the contrary – we deal with a large body for some great creature and this body contains the planets and their distances – means – the matter and space both works geometrically –
 - The solar system is a puppet theater and one thread connects all puppets together –
- Or
- The solar system is a trajectory of energy and each planet is a point on this same trajectory – the difficulty to accept this description is hidden behind the question "what's the space? Or how to create a distance? So long we consider the space as the see separates the ships that will causes difficulties for us to analyze how the planets data was created... the space is Energy and the matter is Energy and by that we can find one equation controls all together...

The Discussion Part II

Now The moon Mass Is Defined By Jupiter Effect

Why Not defined by any other plant mass? **Why Jupiter specifically?**

We have answered that

(1st) Jupiter creates the inner planets orbital circumference

(2nd) Jupiter energy depends on light motion for 2 solar days which can support the value (25920 mkm)

Now what about the other planets? Let's see the data

Data

(1)

Uranus Mass / The Moon Mass = 1189

(A)

$1189 = 177.4 \times 6.7$

(B)

346.6×3.43

(C)

233.1×5.1

(D)

1.9×627 (1.9 deg = Mars orbital inclination and 627 mkm = Earth Jupiter distance)

Gerges Francis Tawadrous/

mrwaheid1@yahoo.com mrwaheid@gmail.com

+201022532292

More Discussion

Equation (A)

$$(\text{Uranus Mass} / \text{The Moon Mass}) = 1189 = 177.4 \times 6.7$$

Where

177.4 degrees = Venus Axial Tilt

6.7 = The Moon Axial Tilt

What does Equation (A) tell us?

Uranus effects on the Moon (the Earth moon – we deal with no other moon here)

Through 2 basics forces which are

(1st) **Venus Effect**

(2nd) **the Moon Axial Tilt**

That means

Uranus effect on the moon is seen by Venus effect! Why we should accept that?!

We have an old equation ... let's remember it here

180.8 degrees = 177.4 deg (Venus axial tilt) + 3.4 deg (Venus orbital inclination)

What's this 180.8 degrees?

Uranus orbital inclination 0.8 degrees so

0.8 degrees + 90 degrees + 90 degrees = 180.8 degrees

And why?

Because

Uranus is perpendicular on the moon orbital from one side and the sun is perpendicular on the moon orbital from the other side – so we have a straight line between the sun and Uranus....

We see that easily with the moon axial tilt

Because Uranus is perpendicular on the moon axial tilt

97.8 degrees (Uranus Axial Tilt) = 90 degrees + 6.7 degrees + 1.1 degrees

Almost perpendicular and we have discussed this equation before frequently....

What we have from that?

The mass is the basic property once again – and Uranus /the Moon Mass is the basic rate by which Uranus effects on the Moon Motion...

Equation (B)

$$(\text{Uranus Mass} / \text{The Moon Mass}) = 1189 = 346.6 \times 3.43$$

Where 346.6 days = The Nodal year 3.4 degrees = Venus orbital inclination

The nodal year (the moon orbit motion) is created by Uranus and Venus effect

The same conclusions are seen by different data – that almost support the argument.

Equation (C)

$$(\text{Uranus Mass} / \text{The Moon Mass}) = 233.1 \times 5.1$$

5.1 degrees = the moon orbital inclination

233 mkm = The Moon Circumference x Mars circumference

Now we understand why the moon should has specific diameter (specific data)?

Because Mars Migration is a change in the solar system and needs correction -

Equation No. (a) supports the same meaning

3- Mars Migration Theory (Proves)

(1st proof) The Giant –Impact Hypothesis (The Geological Proves)

(2nd proof) The Planets Order Analysis

(3rd proof) Mars migration Results

a- The Earth Moon Creation

b- Mars Moons Creation

c- Mars Diameter (and Mass) decreasing

d- The Asteroid Belt Creation

(4th proof) Planet Effect On Its Neighbor

(5th proof) Mar migration Motion Direction

(1st proof) The Giant –Impact Hypothesis (The Geological proves)

As the paper abstract shows how Mars theory is in consistency with The Giant-Impact hypothesis – also Mars migration theory answers many basic questions face the giant –impact hypothesis –as we have discussed–

Why Venus has no moon?

because Mars Motion was from the point (84 mkm) to (227.9 mkm)– so the direction of Motion is defined - and Mars Motion pushed all debris to move with Mars that made a wave pushed all debris far from Venus – So Venus Couldn't create a moon for it. then these debris lost their high motions momentum when reach to Earth position and because Earth mass is greater than Venus – Earth could attracted some debris and created from them its moon –

Mars Moons supports this description because Mars with small mass could attracted 2 moons – How?

Because the debris high momentum is lost already, and its motion became so weak even Mars could attracted its moons –

Also the rest debris was attracted by Jupiter and created **The Asteroid Belt.**

Please review **The Giant –Impact Hypothesis -**

The Lunar Magma Ocean (LMO) Origin– is Venus –

This solution is so important, it solves a serious difficulty – as explained before

Now the question is why Mars had migrated when the sun is created? we have to discuss that later...

Why Mars original orbital distance was 84 mkm?

Because the planet orbital distance depends on its diameter and mass – but the order is disturbed by Mars migration and we don't see it now – the planets order analysis we should discuss in the following point...

(2nd proof) The Planets Order Analysis

Mars migration theory is born basically based on the planets order analysis

(Mercury – Venus – Earth)

This order of planets shows an order in planets diameters, masses and orbital distance – the order rule is

A Greater Diameter Or Mass Needs A Greater Orbital Distance

If this order controls all planets so Mars should be the second planet after Mercury –
But –

(Jupiter – Saturn – Uranus – Neptune – Pluto)

the outer planets order shows that the rule depends on planet diameter (and not mass because Uranus Diameter is greater than Neptune but less Mass) and the rule is reversed from the previous one

i.e.

A Greater Diameter Needs A Shorter Orbital Distance –

This analysis refers to that Mars may be found in a wrong position in the planets order and this wrong position causes a disturbance for the planets order – based on this analysis Mars migration theory can be concluded ... to get **the correct answer** we need to know if **There's A Real Relationship Between Planet Diameter And Orbital Distance.** –

(3rd proof) Mars migration Results

- a- The Earth Moon Creation
- b- Mars Moons Creation
- c- The Asteroid Belt Creation
- d- Mars diameter Decreasing (4.1%)
- e- Mars Mass Decreasing (4.1%)

Simply we have a reason to answer Why Venus has no moon but Mars (mass =1/13) has 2 moons?!

The fact shows itself clearly – there were no debris around Venus to create a moon! But Mars had!? Why? because of the Motion Direction

Mars had moved from the Point (84 mkm) to the point (227.9 mkm) from the sun and pushed all debris with it in the same motion direction – so no debris left around Venus – because all debris had moved with Mars in its Motion Direction

Now if we practice such event – what expectation we may conclude?

Mars Diameter (and Mass) must be decreased

i.e.

Mars Diameter (and Mass) must be decreased than their values when Mars was in its original orbital distance (84 mkm)

Can this conclusion be proved?

The gravitation Equation works only with Saturn and Jupiter Masses – where

$$\frac{(\text{Saturn orbital distance})^2}{(\text{Jupiter orbital distance})^2} = \frac{\text{Jupiter Mass}}{\text{Satrun Mass}} = 3.4$$

If Mars Mass is increased by 4.1% the gravitation equation can work

$$\frac{(\text{Mercury orbital distance } 57.9 \text{ mkm})^2}{(\text{Mars original orbital distance } 84 \text{ mkm})^2} = \frac{\text{Mars Mass } 0.668}{\text{Mercury Mass } 0.33}$$

(Equation Error 3.4%)

Question (1)

Why don't all planets follow the gravitation equation?!

Because of Mars migration which caused disturbance for the planets order

Question (2)

Is there any proof that Mars Diameter is decreased by the same rate (4.1%) **Yes**

Mercury orbital distance 57.9 mkm = Mercury Diameter 4879 km x 10⁹

Earth orbital distance 149.6 mkm = Earth Diameter 12756 km x 10⁹

Satrun orbital distance 1433.5 mkm = Satrun Diameter 120536 km x 10⁹

Mars (org) orbital distance 84 mkm = Mars (org) Diameter 7070km x 10⁹

(Mars Diameter 7070 km is increased than the Mars registered diameter 6792 km with 4.1%)

(4th proof) Planet Effect On Its Neighbor

Let's summarize the idea in following...

- I claim each planet effect on its neighbor planet data and motion
- I provide data shows such effect (for example Earth effects on Mars Motion)

So

- If we have found data claiming that – Mars Motion is effected by Mercury Data – so this data may refer to that – Mars was a neighbor of Mercury

I- Data

(1)

$$687 \text{ days (Mars orbital period)} = 365.25 \text{ days (Earth orbital period)} \quad \times 1.9$$

$$687 \text{ days (Mars orbital period)} = 27.3 \text{ days (The moon orbital period)} \quad \times 25.2$$

But 25.2 degrees = Mars axial tilt and 1.9 degrees = Mars orbital inclination

$$\text{Also } 25.2 \text{ deg (Mars axial tilt and)} = (1.9 \text{ deg. Mars orbital inclination}) \times 13.18 \text{ deg.}$$

Where

The moon motion degrees daily = 13.18 degrees

We should not limit our discussion for just Data consistency – let's see its depth

Because

Mars moves per solar day = 0.524 degrees (=360 degrees /687 days)

The value 0.524 degrees = (1/1.9) where 1.9 degrees = Mars orbital inclination

i.e.

Mars Data (25.2, 1.9, 0.524 ...etc) depends on the solar day period of time

(2)

$$4331 \text{ days (Jupiter orbital period)} = 687 \text{ days (Mars orbital period)} \times 2 \pi$$

II-Discussion

The previous data shows that Earth and moon on one side and Jupiter on the other side all of them effect on Mars orbital period (i.e. effect on Mars Motion)

More Data

Equation No. (1)

$$\left(\frac{\text{Mercury Diameter}}{\text{Mars Diameter}}\right)^2 = \frac{\text{Mars Mass}}{\text{Mercury Mass}} = 0.524$$

Equation No. (2)

$$\frac{\text{Mars Orbital Period 687 days}}{\text{Mercury Day 175.94 days}} = \frac{\text{Mars Orbital Distance 227.9 mkm}}{\text{Mercury Orbital Distance 57.9 mkm}} = 3.93$$

Equation No. (3)

$$\frac{\text{Mars Day 24.7 hours}}{\text{Earth Day 24 hours}} = \frac{\text{Earth Orbital Period 365.25 days}}{\text{Moon Synodic Year 354.36 days}} = 1.029$$

Equation No. (5)

$$7 \text{ deg. (Mercury Orbital Inclination)} = 1.9 \text{ deg. (Mars Orbital Inclination)} + 5.1 \text{ deg. (Earth Moon Orbital Inclination)}$$

(5th proof) Mar migration Motion Direction

Let's summarize the idea in following

- The solar system has one defined motion which is the planets revolution around the sun
- Mars Motion from (84 mkm) to (227.9 mkm) is a new direction of Motion is unknown in the solar system
- In this point I refer to another motion started from Jupiter to Pluto – and this motion is in the same direction of Mars migration Motion which makes Mars migration Motion is a defined motion in the solar system and not a unique one
