Abstract: On Friday, April 24<sup>th</sup>, 1964 at about 5:50 P.M., Lonnie Zamora saw an alien spaceship with beings walking around outside of it. He also saw a red symbol on the side of the alien spaceship. This paper serves to explain what that symbol stood for. It was a “this side up” symbol, a common symbol used on boxes and items that need to be given an orientation in 3D space. Explanation is provided with some other conjecture.

Lonnie Zamora saw an alien spaceship and aliens walking around. The spaceship had a symbol on its side in red:

This is artists impression of Lonnie's sketch, with color and depth added.

**Lonnie Zamora's Sketch of Alien Craft with Strange Symbol**

It is not a "strange" symbol, it is a universal symbol for "this side up" used on boxes for shipping material. The rounded top just signals that the top is round, and the flat line is for the ground, and the arrow is the direction for orientation. The craft is symmetrical on the Z, Y and X axes. I think it would be natural in both manufacturing and/transportation for this symbol to be present, since the craft had a flush door and was the same color all over. Which side would be "up" for an egg? How is one to know without a clear designation from a person standing outside the craft, given the legs were retracted back into the craft. Lets not let common sense escape us.

The letters were red, which means the beings probably had similar biology to us, the red signals danger (blood) and is quite visceral (evolutionary). The fact that the symbol is used for shipping probably means that these craft were produced in the thousands, if not more. It was probably a research vessel, one of many, exploring the galaxy for this particular species.

This symbol is used on boxes (with the outline of the box shape) to tell people of any language to orient the box in this direction.
